

PLURYAL MESOLINE
AGE WITH CONFIDENCE

YOUR MOST BEAUTIFUL AGE IS NOW!

**YOUR MOST
BEAUTIFUL
AGE IS NOW!**

A black and white photograph of a modern laboratory. The scene is dominated by long, white, curved laboratory benches. On the benches, there are various pieces of glassware, including round-bottom flasks, Erlenmeyer flasks, and several large, pear-shaped glass vessels hanging from a metal frame. The background shows more laboratory equipment and a clean, minimalist aesthetic. The lighting is bright and even, highlighting the textures of the glass and the smooth surfaces of the benches.

PRODUCT OVERVIEW

Pluryal Mesoline

Pluryal Mesoline are safe, highly concentrated and innovative Sterile Serums:

Developed to allow aesthetic medical practitioners to improve the condition of the skin (face and body) and hair.

Featuring textures and compositions which are carefully developed to allow an optimal penetration of the formulas into the skin or scalp.

Offering the widest range of ready-for-use formulations targeting all indications that aesthetic practitioners face in their daily practice.

3 ACTIONS 10 PRODUCTS

Skin - Body - Hair

Regenerate

WHY CHOOSE PLURYAL MESOLINE?

The “Pluryal mesoline” sterile serums are manufactured in accordance with the “**GECISS SERUMS**” technology.

GREEN SERUMS

Sterile serums with no added preservatives are used, in respect with the “green beauty” philosophy. Vegetable components are also present in many variants of the product to bring natural benefits in the skin.

EFFICIENT SERUMS

Thousands of satisfied users and more than 10 million treatments sold are the proofs of the products’ excellent results.

CONCENTRATED SERUMS

Main actives ingredients are highly concentrated, for a greater efficacy and a better skin penetration during the treatment.

INNOVATIVE SERUMS

The R&D department focused on innovative associations of the actives ingredients, in the most stable forms, in order to enhance the performance of the products.

SHORT SERUMS

Each formula uses few ingredients for a greater efficacy of the peculiar characteristics brought by each component.

SAFE SERUMS

The manufacturing process is in compliance with the highest safety and compliance standards, operating in a certified full quality system under ISO 22716 and GMP certifications.

01

PRO-AGING CARE

TIME CHANGES SKIN

Under the influence of intrinsic and extrinsic factors affecting the aging of the skin, we can observe skin textural changes which translate into:

- Appearance of lines and wrinkles
- Loss of firmness and elasticity
- Loss of glow, tone and hydration
- Appearance of brown spots / changes in the complexion colour
- Worsening of the dilated pores
- Roughness

**Aging is a fact of life
LOOKING YOUR AGE IS NOT**

Pluryal has developed 6 products which answer in a targeted manner the skin textural changes often responsible for the global tired and unhealthy look.

Refresh | Tight | Shine | Clear | Antiox | Radiance

Every product taken alone or used in combination with others will give a targeted action to repair the skin textural problem in few sessions.

PLURYAL MESOLINE REFRESH

Revitalising Action

The natural production of hyaluronic acid, collagen and elastin reduces with age and under the influence of several external factors. As a result, wrinkles appear; the skin starts to look tired due to a lack of tonicity and glow.

Hyaluronic acid used in a very high concentration, boosted by the regenerating action of plant stem cells, salmon DNA and vitamins, can effectively combat these symptoms.

Composition

Hyaluronic acid 50mg/vial

Hyaluronic acid can accumulate and retain 1,000 times its weight in water, which may help the skin remain hydrated | Hydrates and regenerates the skin* | Visibly improves the elasticity of the skin | Helps renew skin tissue

Vegetal stem cells booster

Induction of dermal stem cell differentiation in fibroblasts, responsible for the production of elastin and collagen and agents in skin repair**. This allows the skin to rediscover its elasticity and stretch-resistance properties.

Salmon DNA 10mg

Because of its restorative effects on proteins, Salmon DNA acts against collagen destruction by sun rays, oxidative stress and tobacco (free radicals' damages).

Vitamins (A, B5/B6/B3)

A careful selection of vitamins for their skin benefits:

Vitamin B5: strong hydrating effect

Vitamin A: anti-wrinkle effect

Vitamins B3 & B6: skin protective effect

Indications

Loss of glow and loss of elasticity in the sun exposed areas | As a preparation cure for the skin, before applying dermal fillers or botulinum toxin, to give more natural and harmonious results.

Focus areas

Face | Neck | Décolletage | Dorsum of the hands

Advantages

Double hydration: the highest concentration of hyaluronic acid on the market (50mg) combined to a high concentration of panthenol (vitamin B5)

Triple effect:

Hydrating

Plumping: the regeneration of collagen and elastic fibers thanks to the presence of plant stem cells and salmon DNA.

Protective: presence of key vitamins

Clinically tested***

Before

After

Before and After 2 treatment sessions of Pluryal mesoline REFRESH combined with TIGHT and ANTIOX using the microneedling technique, in association with Pluryal BOOSTER and CLASSIC, Botox and LED therapy.

*** S. Boisnic, B. Slama published study on Pluryal Mesoline Refresh and Tight.

PLURYAL MESOLINE TIGHT

Lifting Action

External aggravation, losses of structure and gravity help to create a lack of firmness in the skin. The silicium-enriched DMAE and the protective action of the antioxidants enable the skin to be restructured and for the firmness of the skin to be improved.

Composition

DMAE

Several studies have proven that DMAE (dimethylaminoethanol) increases the dermal thickness of the skin leading to a lifting effect.

Silicium

Silicium is important for optimal synthesis of collagen and for activating the hydroxylation enzymes, playing a major role in the formation of collagen network, improving skin strength and elasticity. It is also associated with the synthesis of glycosaminoglycans.

Panthenol

Excellent moisturizer, panthenol has been effectively used to treat sunburns, irritations, dryness and other minor skin disorders. Helps diminishing wrinkles by infusing moisture into the deeper layers of the skin.

Ferulic acid

Ferulic acid acts like other antioxidants in that it helps to slow the aging process by reducing the effects of damaging free radicals on the skin. It is also thought to protect against sun damage, as well as assisting in skin's regeneration functions to tackle skin that has already been over-exposed.

Minerals (copper, zinc, magnesium and manganese)

Skin regeneration, regulation and protection.

Indications

Flaccid skin | Acne scars | Dilated pores | Stretch marks

Focus areas

Face contours | Décolletage | Stretch marks

Advantages

Collagen boosting effect thanks to the synergic action of Silicium, DMAE and minerals. Protective effect preventing future damage thanks to the presence of a strong antioxidant: Ferulic acid.

Clinically tested*.

Before

After

The treatment is carried out using Pluryal BOOSTER and Pluryal CLASSIC injections, then Pluryal mesoline TIGHT administered with a 1mm Pluryal mesoline Roller.

PLURYAL MESOLINE SHINE

Brightening Action

Hyperpigmentation can occur in any type of skin and ethnicity. It increases with age and mainly affects premenopausal women. All the components of Pluryal Mesoline SHINE are clinically proven to inhibit the tyrosinase, an enzyme which is involved in melanin synthesis.

Composition

Ethyl ascorbic acid

The clinical applications of ethyl ascorbic acid or vitamin C include antioxidative, photoprotective, antiaging and anti-pigmentary effects. It has been described to improve scar's appearance and was shown to be efficient as a depigmentation and anti-aging treatment, as demonstrated in several clinical investigations.

Phytic acid

Currently, phytic acid is largely used as a depigmenting agent, acting through the inhibition (by chelating copper and iron ions) of tyrosinase and also acting as an antioxidant in bleaching hyperchromic spots.

Pyruvic acid

Pyruvic acid has been used since years for the treatment of moderately photodamaged skin or for skin lightening.

Kojic acid

Kojic acid has been investigated in a clinical study as early as 1996 and shown to be highly effective in reducing the pigment in melasma patients.

Mulberry leaves extracts (morus alba)

Extract and active components of mulberry fruit (Morus alba) have demonstrated numerous biological activities, including antioxidant activities as shown in vitro and in vivo studies. Its effect in the treatment for melasma has been observed in a randomized placebo-controlled clinical investigation.

Indications

Melasma | Sun spots | Post-inflammatory | hyperpigmentation

Focus areas

Face | Dorsum of the hands

Advantages

The only sterile serum product composed of Vitamin C+ 4 tyrosinase inhibitors. Free from hydroquinone = compliant with EU regulations (hydroquinone is prohibited in Europe).

Easy treatment, without social eviction.

Before

After

Before and After 3 treatment sessions with Pluryal mesoline SHINE in association with Pluryal BOOSTER.

Courtesy of Dr. Marina LEKOMTSEVA, Russia

PLURYAL MESOLINE CLEAR

Clarifying Action

Acne-prone skin also ages and requires a special treatment which can both control the sebum secretion of the skin whilst maintaining its moisture level. The choice of anti-inflammatories combined with a complex containing a high concentration of hyaluronic acid as well as vitamins provides this double action.

Composition

Retinyl palmitate

Anti-inflammatory and immuno-regulatory action controlling the inflammatory acne activity. Regulates the production of sebum.

Ginkgo Biloba

Anti-acne, anti-aging and antioxidant effects are clinically proven. Extracts from the seeds of the Ginkgo biloba tree have shown antibacterial activity on pathogens that can cause skin infections such as acne by inhibiting the growth of *Cutibacterium acnes*, *Staphylococcus aureus* and *Streptococcus pyogenes*.

Salicylic acid

The efficacy and safety of salicylic acid has been demonstrated in randomized clinical investigations which showed a significant improvement of acne lesions, by minimal side effects.

Hyaluronic acid 10mg + Vitamin Complex (B5, B3, B8 & E)

Hyaluronic acid and panthenol maintain hydration, reducing the transfer of melanin, controlling the possibility of post inflammatory hyperpigmentation.

Niacinamide and tocopherol have an anti-inflammatory effect regulating the redness caused by acne. In addition, the niacinamide regulates the amount of acne-causing oil being produced by the glands in the skin.

Indications

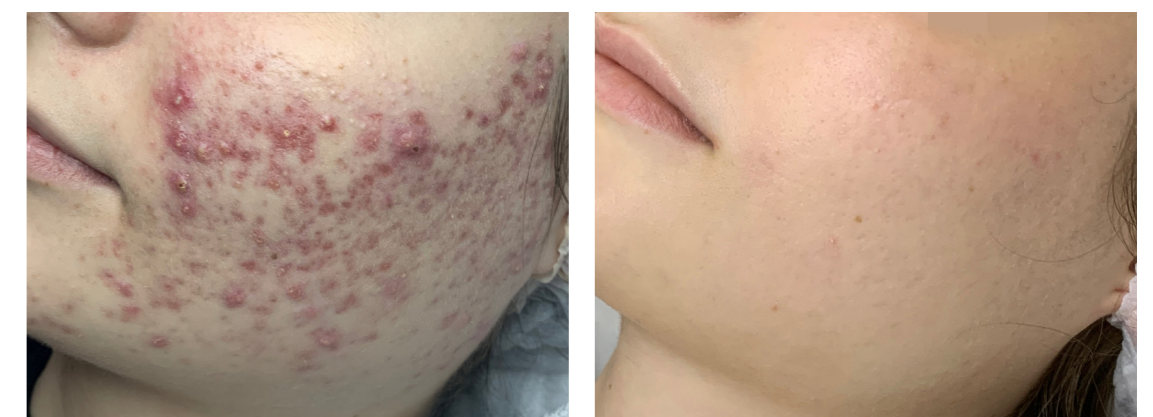

Young adults with acne prone skin, blackheads, whiteheads and dilated pores. Aging patients with acne prone skin presenting dilated pores, acne scars, pimples in the T-zone area.

Focus areas

Face | Back

Advantages

The first and only care for treating aging acne-prone skin. Regulates the sebum activity in the skin while preserving its hydration.

Before

After

Before and after 6 treatment sessions with Pluryal Mesoline CLEAR at 10-day intervals.

Courtesy of Dr. Anahit MARTIROSYAN, Armenia.

PLURYAL MESOLINE ANTIOX

Antioxidant Action

Despite the presence of the cells' antioxidant defense system to counteract the effects of ROS (reactive oxygen species), oxidative damage accumulates over a lifespan and has been implicated in aging as well as a number of age-related diseases. In addition, under conditions which promote oxidative stress, e.g. inflammation or surgical procedures, endogenous antioxidants may not be sufficient to counteract the effects of ROS, particularly as we age and endogenous antioxidative mechanisms and repair processes become less effective.

Composition

Glutathione 37.5mg & Alpha Lipoic acid

Powerful antioxidants, glutathione and alpha lipoic acid fight free radicals. They increase the levels of Vitamins C & E in the body.

Alpha Lipoic acid increases the level of glutathione in the body.

Glutathione has a clinically proven antiaging effect since it improves the elasticity of the skin and reduces the wrinkles. It has in addition a whitening effect described in various studies.

Mannitol 25mg

Protects the hyaluronic acid from being attacked by hydroxyl radicals (when an inflammation occurs during injection or treatment).

N-Acetyl-cysteine

NAC stimulates glutathione biosynthesis, promotes detoxification, and acts directly as a scavenger of free radicals.

Amino acids (taurine, proline, cysteine, cystine)

Amino acids help build dermal density, increase skin brightness, provide defenses from environmental hazards and improve skin hydration. They contribute to collagen synthesis.

Zinc

Regulates the sebum secretion in the skin and stimulates the elastin synthesis.

Indications

Dull skin (smokers, stressed patients, patients with imbalanced diet) | Young adult with diet imbalances | Patients with aggressed skin: after skin trauma, surgery, sunburns, etc | Highly recommended to perform a cure before dermal fillers injections to prolong and optimize the dermal fillers effects.

Focus areas

Face (including dark circles) | Scalp

Advantages

A unique product to regulate the functions of "damaged" or aggressed skin or scalp.

Dual use: skin and scalp.

Protects against fast degradation of hyaluronic acid thanks to the presence of mannitol.

Before

After

Before and after 2 treatment sessions with Pluryal Mesoline ANTIOX at 10-day intervals.

Courtesy of Dr. Zara KHOUDAVERDYAN, Armenia.

PLURYAL MESOLINE RADIANCE

Glowing Action

Hyperpigmentation is a common, usually harmless condition in which patches of skin become darker in color than the normal surrounding skin. This darkening occurs when an excess of melanin, the brown pigment that produces normal skin color, forms deposits in the skin, due to: exposure to the sun, female hormones, Post-inflammatory hyperpigmentation, pollution and free radicals, certain diseases, medication in-take, genetics... It can appear on the whole face and whole body.

The 3 active ingredients of Pluryal Mesoline RADIANCE are working in synergy to fight hyperpigmentation in the whole body, in dark hairy areas and severe hyperpigmentation in the face (and dark circles).

RADIANCE is stronger than SHINE.

Composition

Tranexamic acid 3%

Tranexamic acid has depigmentation capacity by decreasing tyrosinase activity, which regulates melanin formation in hyperpigmented areas and by deleting melanin hyperproduction

It also works on the reduction of redness (excessive skin vascularity).

Glutathione

Depigmenting & Lightening agent: Inhibits melanin production (tyrosinase deactivation). In addition, the low tyrosinase activity and high level of cysteine (present in glutathione) promote more phaeomelanin (yellow-orange melanin) and less eumelanin (brown-black melanin) production. Converts melanin to a lighter color by switching from eumelanin to phaeomelanin production (= lighter skin colour).

Anti-aging effect and slows down cellular aging (improvement of elasticity and reduction of wrinkles)

Antioxidant : involved in the cellular immune system, neutralizes free radicals, plays a prominent role in maintaining intracellular redox balance. Inhibits lipid oxidation.

Carnosine

Antioxidant and anti-inflammatory di-peptide.

Stimulates collagen synthesis.

Anti-glycation (Glycation = Bond between a sugar and a protein, like collagen and elastin): Prevents collagen from losing its properties and keeps the skin firm.

Indications

Severe hyperpigmentation in the face (melasma, dark circles, PIH) | Hyperpigmentation in the body (arms, legs, back) | Dark hairy areas (armpits, intimate areas)

Focus areas

Face | Dark circles | Body

Advantages

The only serum highly concentrated in tranexamic acid to fight hyperpigmentation all over the face and body.

Powerful depigmenting and lightening ingredients working in synergy

Before

After

Before and after with Pluryal Mesoline Radiance

02

HAIR
CARE

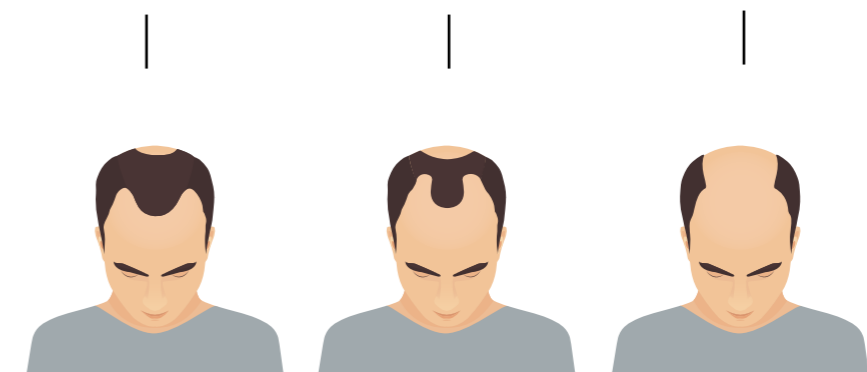

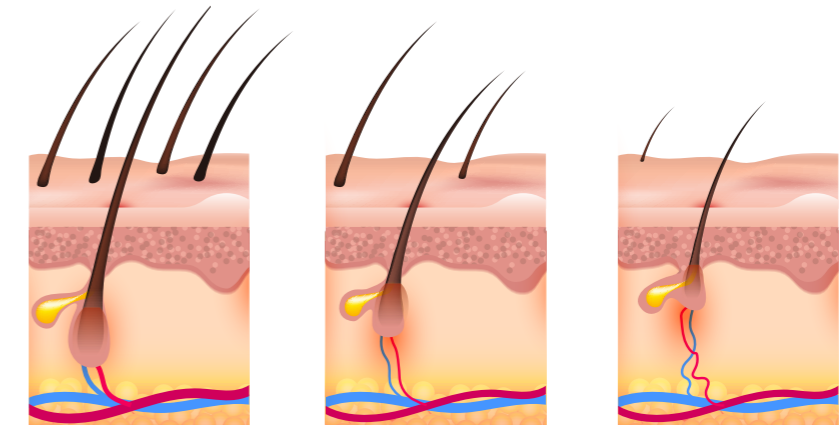

UNDERSTANDING HAIR LOSS

There are different types of alopecia or hair loss conditions.

In more than 90% of the cases, alopecia is described as "androgenic alopecia" or "telogen effluvium".

Androgenic alopecia is the most frequent form in men (58%) and affects also 10% of premenopausal women. It is a gradual loss of hair due to the influence of male hormones. The hormone which is traditionally blamed for this is dihydrotestosterone (or DHT), under the activity of the 5-alpha reductase enzyme.

LET YOUR HAIR
GROW & GLOW

Androgenic alopecia in males

Telogen effluvium is the most common cause of diffuse non-scarring alopecia. It is characterized by an abrupt onset of diffuse hair loss usually seen 2-3 months after a triggering event. It is characterized by diffuse, often acute hair shedding.

Thanks to its unique and innovative composition, Pluryal mesoline Hair can efficiently treat patients presenting androgenic alopecia or telogen effluvium, used alone or in association with Pluryal mesoline Antiox.

Other hair loss conditions such as scarring alopecia or alopecia areata / totalis / universalis necessitate other types of treatments.

Pluryal mesoline Hair presents an effective solution for hair-loss patients, offering repair action on multiple facets.

PLURYAL MESOLINE HAIR

Hair Repair Action

Pluryal mesoline Hair features ingredients which are able to stop hair loss, promote hair growth and improve the hair quality. This product is the best-seller of the range and number one treatment for haircare in many countries.

Composition

Copper peptide

Inhibits 5-alpha reductase activity, an enzyme associated with the occurrence of androgenic alopecia. It has an important anti hair loss effect.

Stem cells booster

Pisum sativum extract is a clinically proven* stem cell activator which is a small peptide.

mixture extracted from pea (vegetal origin) to activate stem cells in the hair follicle, promoting hair growth by its stimulatory effects on follicle stem cell growth, migration and differentiation.

Vitamin B complex + Amino acids + Hyaluronic acid

Vitamins, amino acids and hyaluronic acid have all a positive effect on the hair.

Vitamin B6 (pyridoxine), Vitamin B5 (panthenol) and Vitamin B3 (niacin) promote healthy hair and hair growth.

Arginine and lysine (amino acids) have a positive effect on hair growth since hair is composed of protein made up of linear amino acid chains.

Hyaluronic acid intensively moisturizes hair follicles, stimulates fibroblasts, and acts as protection from antioxidants.

Caffeine

Caffeine promotes blood circulation of the scalp. As a result, hair becomes thicker and its growth is stimulated.

Indications

Androgenic alopecia in men and women | Hair thinning | Telogen effluvium (in association with Pluryal mesoline Antiox) | Post hair transplantation to activate faster growth.

Focus areas

Scalp

Advantages

Triple effect:

Stops hair loss, stimulates hair growth and improves hair quality.

Provides an alternative to drugs prescribed for treating androgenic alopecia which often have side effects or should be used continuously.

Fast results (after 6 / 8 sessions)

Before

After

Before and after 8 treatment sessions with Pluryal mesoline HAIR and ANTIOX using the microneedling technique (Roller of 0.5mm)

03

REMODELLING
CAREAGING AFFECTS YOUR
FACE AND BODY SHAPE

Genetics, bad eating habits and aging can have consequences on the shape and the skin of the submental and body areas.

Unwanted fat can be located in the submental area (the so-called double chin) or in some “body” areas such as thighs, buttocks, abdomen, flanks, knees and even inner arms. These localized fat deposits are often resistant to diet and exercise.

Orange peel effect (cellulite) affects the women more than men due to the different fat, muscle, and connective tissue distribution. It's thought to affect 80 to 90 percent of women in varying degrees.

Body Skin slackening, often associated with cellulite, can also occur after pregnancy, after weight loss or simply with aging.

Pluryal has developed 3 products which answer in a targeted manner these changes and restore the patients' confidence in their look.

Facecontour | Bodycontour | Bodyfirm

Every product taken alone or used in combination with others will give a targeted action to remodel the targeted area.

PLURYAL MESOLINE FACECONTOUR

Shaping Action

Submental fat represents an aesthetic problem in both younger and older male and female patients. It can occur regardless of body mass. It is a major aesthetic concern because it is noticeable. Until recently, the treatment of submental fat has been limited to invasive procedures which are associated with the risks of anesthesia, bleeding, bruising and scarring. Deoxycholic acid offers an innovative, clinically proven efficient and easy solution for treating the submental fat.

Composition

DEOXYCHOLIC ACID 1%

It is a bile acid which emulsifies and solubilizes dietary fats in the intestine. It disrupts cell membranes in adipocytes and destroys fat cells in that tissue.

FLAVONOIDS

Aesculus Hippocastanum

Seeds from horse chestnut trees known for their action in reducing inflammation and swelling.

Equisetum Arvense

Contains saponins, flavonoids, and silica, which are attributed to the herb's ability to strengthen and regenerate skin tissue. Thanks to its high levels of silica, it is used to heal wounds.

Ginkgo Biloba

It is rich in flavonoids and is a potent antioxidant that protects skin from the harmful effects of free radicals that accelerate aging.

Indications

Submental fat

Focus areas

Double chin

Advantages

Proven efficient in fat melting (hundreds of publications available on deoxycholic acid)
Presence of three flavonoids to neutralize the swelling reaction associated with deoxycholic acid administration.

Before

After

Before and after 3 sessions of Pluryal Mesoline FACECONTOUR in the lower third of the face, at 2-week intervals.

Courtesy of Dr. Serine El ALI, Jordan

PLURYAL MESOLINE BODYCONTOUR

Shaping Action

Aging, weight-gain or a hormonal disorder are the main factors responsible for the presence of fat in certain parts of the body (saddlebags on outer thighs, knees, abdomen). A formulation composed of phosphatidylcholine and deoxycholic acid has been clinically proven to effectively treat these localized fat deposits. It is a highly interesting alternative to invasive treatments such as liposuction especially for small fat deposits.

Composition

Phosphatidylcholine

Naturally present in the body (a component of bile), it is extracted from soy lecithin. It has a proven effect on fat emulsion and is able to alter cholesterol and other triglyceride metabolism, increasing the cholesterol solubility and altering the composition of fat deposits. Medically it is used in the intravenous treatment of lipid arethomas, hypercholesterolemia, fat embolism, fatty deposits.

Deoxycholic acid

It is a bile acid which emulsifies and solubilizes dietary fats in the intestine. It disrupts cell membranes in adipocytes and destroys fat cells in that tissue.

Indications

Localized fat in the body area

Focus areas

Abdomen | Thighs | Buttocks | Hips | Knees

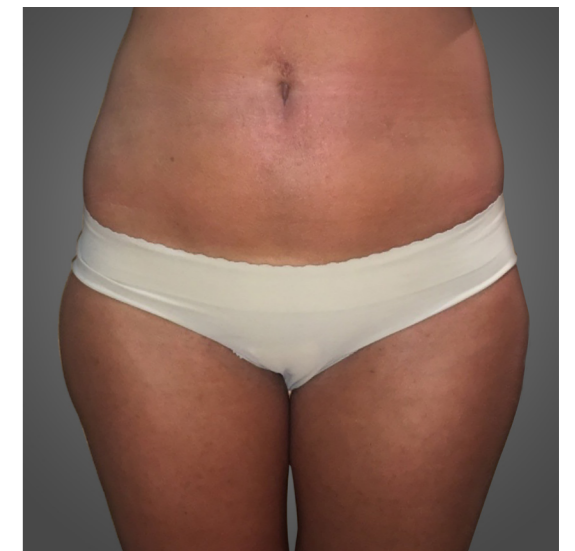

Advantages

Clinically proven formulation efficient in fat melting. Hundreds of publications confirmed the efficacy of the association of phosphatidylcholine and deoxycholic acid in reducing the localized fat deposits.

Contains two main ingredients which have been extensively researched and successfully used for fat emulsion.

Before

After

Body fat dissolved (abdomen and love handles) after 12 treatment sessions with Pluryal Mesoline BODYCONTOUR at 1-week intervals.

Courtesy of Dr. Marwa ZEIN, Lebanon

PLURYAL MESOLINE BODYFIRM

Smoothing Action

Treating cellulite or “orange peel” requires a comprehensive approach to tackling its causes: swelling of the fat cells, a lack of firmness and venous insufficiency and circulatory failure. Pluryal Mesoline Bodyfirm features ingredients which have lipolytic, draining and firming actions, to smooth out evenly the skin.

Composition

Caffeine

Caffeine is used for treating cellulite as it is involved in lipogenesis, lipolysis and the transport of glucose. LipoProtein Lipase which synthesize triglycerides is inhibited by caffeine.

L-carnitine

Helps transport fat into the mitochondria of cells. Once there, they can be to generate oxidized adenosine triphosphate, or ATP.

Centella asiatica

Normalizes the metabolism occurring in the cells of the connective tissue, shows anti-inflammatory and draining activity and regulates microcirculation.

Silicium

Stimulates the collagen synthesis and hence improves the skin's firmness.

Ruscus aculeatus

It is a potent venous vasoconstrictor. It has flavonoids that enhance capillary resistance and decrease vascular permeability and edema, which leads to an improvement in lymphatic drainage.

Indications

Cellulite (orange peel effect) | Skin slackening in the arms, legs and buttocks | Heavy legs

Focus areas

Legs | Thighs | Buttocks | Inner arms

Advantages

A strong formula dealing with the causes of orange peel effect globally.

Easy treatment with fast results.

Triple effect: tightening, draining and smoothing.

Before

After

Before and after 3 treatment sessions with Pluryal mesoline BODYFIRM at 1-week intervals.

MESOLINE COMBOS

HOW TO COMBINE THE PRODUCTS?

Facecontour + Tight

Lower third of the face (submental fat):

Dissolve the fat
Tighten the skin

Refresh + Shine

Menopause patients

Regenerate the skin
Treat the pigmentary disorders

Tight + Clear

Oily skin with dilated pores or acne scars

Regenerate the collagen and reduce
acne scars / dilated pores.
Regulate the excessive sebum secretion

Radiance + Shine

*Resistant hyperpigmentation in the face
and body*

Treat all hyperpigmentation in synergy
Brighten and illuminate the skin

Radiance + Refresh

Tired and dull skin

Regenerate and revitalizes the skin
Treat hyperpigmentation

Radiance + Clear

*PIH and acne scars in
face and body*

Reduce acne spots
Regulate the
excessive sebum
secretion

Bodycontour + Bodyfirm

*Localized fat and
slackened skin /
orange peel*

Dissolve the fat
Smooth and tighten
the skin

Antiox + Hair Telogen effluvium

Neutralize free
radicals
Stimulate the hair
growth

Refresh + Antiox Dull skin of smokers

Regenerate the skin
Neutralize free
radicals
